## Air Stoves

HEAT TO SINGLE ROOM

A wood pellet Air Stove can be used to heat a single room of almost any size and can also distribute heat to adjoining rooms quite effectively by means of its built-in fan. The fan creates circulation of air and leaving doors open will allow this warm air to distribute throughout the house.

Kalor produce the most efficient Air Stoves on the market and offer a huge range of options in terms of power, colours and design.

AIR STOVES

## Ductable Air Stoves

SHARE HEAT WITH ADDITIONAL ROOMS

Kalor offer an impressive range of Ductable Air Stoves in a range of styles which offer a unique method of heat distribution without the requirement for pipes or radiators.

Heat is simply moved through a duct using the stove's integrated fan, to a room or rooms above or adjacent to the stove itself.

DUCTABLE AIR STOVES

## Slimline Stoves

SLIM, SPACE-SAVING DESIGN

Kalor bring a wide selection of Slimline wood pellet stoves to the market which offer a neat, slim design and despite their size, extremely high efficiency.

A Kalor Slimline stove is only 249mm deep and can therefore fit in even the tightest spaces.
